

GameDay Passport: Dark Mode

Last Modified on 26/08/2022 2:59 pm AEST

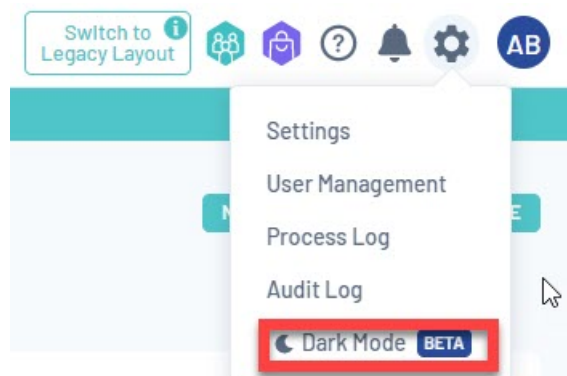

GameDay Passport now allows users to view and navigate the system using "Dark Mode". Currently the system defaults display in a 'Light Mode". Dark mode allows admins the ability to view the system in a contrasting dark mode which assist some users view content with a greater contrast and may be a personal preference for how users wish to view content on their screen.

To toggle between Dark and Light mode:

1. Log into your database.
2. Click on the SETTINGS COG

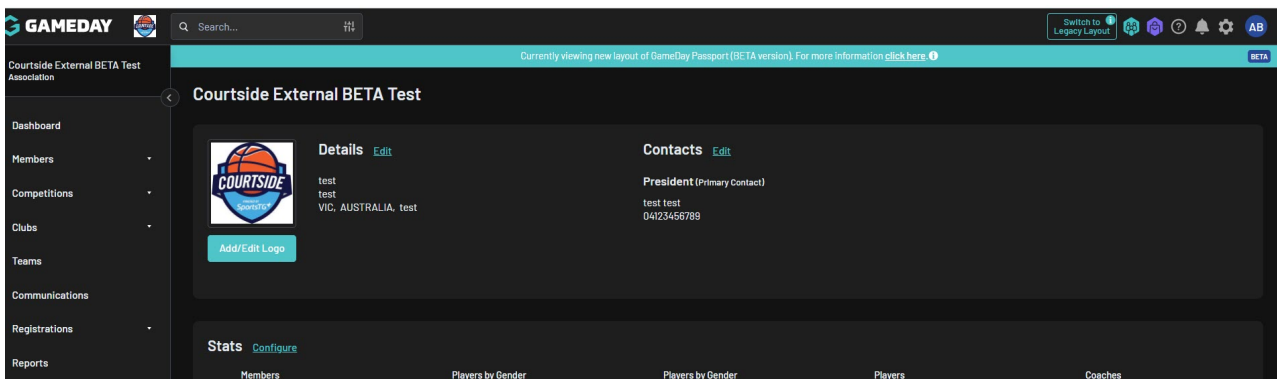

3. Click on the DARK MODE option

BETA phase: You will notice that Dark Mode will display as BETA due to the fact that it is in its initial release phase - this allows for a period of feedback to be provided by users. Users will always be allowed to toggle back and forth between dark and light mode. It will likely remain in BETA phase for 2-3 months.

This will change the theme to dark mode, where admins can go about their normal admin processes, just in a different colour mode.

NOTE: if you change this mode to dark mode and then log out, when logging back in it will remember this mode and keep you in it so if you wish to stay within the light mode make sure to toggle back before logging out.

To toggle back to the light mode, within the settings cog, click LIGHT MODE.
