## Who is etrainu?

Our e-learning partner etrainu is a leader in the design, development, delivery and commercialisation of eLearning courses for any sized sports organisation.

As part of our partnership with etrainu, GameDay Passport administrators now have the option to integrate with their etrainu Learning Management System to offer course registrations through their Passport database, allowing automatic course enrolment and reporting of qualification course progress and achievements.

**Note:** GameDay's integration with etrainu is a custom feature requiring bespoke configuration for each sport. Please [click here](#) for more information on getting started.

## How does the integration work?

[^Top](#)

The integration requires your sport to have:

- a) An existing etrainu LMS with courses available
- b) An existing GameDay Passport account with the 'Courses' feature enabled

We will then set up an API integration between the two platforms to facilitate the end-to-end

process outlined below:

### **Step 1: User completes their course registration**

In GameDay Passport, you can create a 'Course' product and link it to one of your existing qualification courses in etrainu. This allows you to collect course payment and registration directly through your Passport registration system, which then automatically creates an etrainu account for the user and enrolls them in the linked course.

### **Step 2: User logs into etrainu to complete course**

Users that have registered for a course can then login to etrainu using the same credentials as their Passport account. Their etrainu portal can be accessed directly through their Passport member profile.

### **Step 3: Qualification progress and completion become available in GameDay Passport**

As users progress through their courses in etrainu, administrators can track course registrations, progress and completion metrics through the GameDay Passport 'Qualifications' functionality.
